Did you know that 65% of our planet is still unexplored? This percentage rises to over 80% for the oceans. What about the rest of the universe?

How about taking your kids to discover the limits of the unknown? They certainly dream about an escape, about getting out of isolation and changing their routine. Come join us in November for our “Little Explorers” program!

All week long, our adventurers will quench their thirst for exploration by conquering the depth of the oceans, earth's landforms, space and why not a little jump in time? The teachers have prepared moments full of surprises for our little explorers to have fun while educating themselves. On the program: arts, games, sport, history, science and so much more!

DON'T FORGET YOUR COMPASS AND TELESCOPE!

A list of basic items to buy will be provided before the workshop starts.
